IDEP Standing Orders Minority-Majority-Change Dataset (version: 2015-11-27)

The dataset is a compilation of data based on several data-sets: ERD European Represantatives Dataset, Release 3, February 2014, ISORD IDEP Standing Orders Reform Dataset, version 2.08, ParlGov Parliaments and governments database, 2012 release

Its structure has several levels/layers – time episodes for cabinets in different countries starting as early as June 1944 up October 2010.

The basic structure of cabinet time episodes stems from ERD. Information on standing orders reforms was merged/joined from ISOR dataset by matching reform dates (date of acceptance of the reform or if not available earliest date available) into cabinet time spans (and countries). All measures of ideological positions, distances and polarization come from CMP which was merged/joined with ParlGov first (ParlGov includes the CMP party id variable). ParlGov in turn was used as source of volatility measures. Having merged/joined ParlGov and CMP this combined dataset was than joined with ERD by matching cabinet start dates (automatically and by hand due to occasional differing start days).

The data set incorporates aggregated data for 384 cabinets in 14 countries and consists of 1248 variables.

Example:

```
#### R-code: ####
isom %>%
  select(ctr, cab_pm, cab_in, cab_out, wds_chg_sum, pro_minmaj_qual, idl_pnt_all, volatility) %>%
  mutate(
   idl_pnt_all = round(idl_pnt_all, 1),
   volatility = round(volatility, 1)
)
```

```

Variable Descriptions

Notes

The variables of the ISOR dataset are extensively described in a seperate codebook (isor_codebook.pdf) – therefore only some of those variables are presented here.

Since there might be more than one SO reform (ISOR) that took place during the course of a cabinet ISOR data had to be aggregated:

- all ISOR variables preserve their name
- but if values had to be aggregated the variables names get an extra suffix:
 - **fst** for the value of the first reform of a cabinet time span
 - lst for the value of the last reform of a cabinet time span
 - **mn** for the mean value
 - **sum** for the sum of all values

• Furthermore, due to the aggregation of ISOR data an additional variable is provided: **n_reforms** captures the number of times SO were changed during the course of a cabinet.

For a version of the very same data set prior to aggregation have a look at isom_non_agg.Rdata respectively isom_non_agg.dta.

```

Tsebelis derived

```
ext tsb agc1 (Tsebelis )
```

This variable is based on *George Tsebelis* (2002): Veto Players: How Political Institutions Work, Princeton table 7.3 at page 182 and measures government control of the legislative agenda.

The cross section values found in the table were assigned to those SO versions that were enacted in 1985 (when the agenda control measure was gathered). To extrapolate the measure over time it was: 1) multiplied by the number of words for those 1985 versions, 2) the change in majority prone and minority prone words was added (majority words as positives, minority words as negatives) 3) these text lengths were again divided by the lengths of the 1985 versions.

Because it is unclear which numeric relation the agenda control measure and the change of pro majority / pro minority words might hold (one would need a second time point to determine that) the variable exists in three variations: ext_tsb_agc1, ext_tsb_agc2 and ext_tsb_agc4. The numbers indicate by which factor the change in majority/minority friendly words was multiplied to give it an higher impact (1, 2, 4) thus increasing the variance of the agenda control extrapolation.

```

pro_minmaj_qual (ISOR textlines, linelinkage, manual coding)

Whether or not the reforms amde by the cabinet were in general was pro majority (1), pro minority (-1) or neither (0), the decission was made by comparing the number of sub-paragraphs/lines changed in each direction. If there was no change in favor of majority but changes in favor of minority it was considered minority friendly and vice versa. If changes in both directions took place the differences in the SO texts were cosidered.

Below are listed those cabinets that had to be

ref_n (texts)

Number of SO reforms within cabinet duration. Equals NA/missing if no information was available.

```
class : numeric
unique : 19
NAs : 15
not-NA : 383
not-0-NA : 230
sum : 710
range : [0] ... [20]
examples : [0], [3], [1], [0], [2], [5], [0], [10], [0], [0] ...
```

ref__date__fst (texts)

Date of the SO version - equals to (according to availability) enactment, promulgation, acceptance.

```
class : Date
unique : 228
NAs : 168
not-NA : 230
not-O-NA : 230
sum : -
range : [1945-11-22] ... [2011-01-01]
examples : [1998-01-01], [1974-02-28], [1973-10-02], [2002-07-04], [1980-10-01], [1977-09-1]
```

ref_dplus_fst (texts)

Version counter that is zero under normal circumstances but might be higher if more than one version got enacted on the same date.

```
class : integer
unique : 4
NAs : 168
not-NA : 230
not-0-NA : 9
sum : 11
range : [0] ... [2]
examples : [0], [NA], [0], [NA], [0], [NA], [NA], [NA] ...
```

db_version (ISOR, db)

Version of the database which was used to create the data set. On every change the version number goes up by 0.01 - there is no distinction between major and minor version.

$db_lastupdate (ISOR, db)$

Date at which the database was last updated.

```
class : character
unique : 1
NAs : 0
not-NA : 398
```

```
not-0-NA: 398
sum: -
```

range : [2015-09-14 15:02:29] ... [2015-09-14 15:02:29]

. . .

lns_chg_sum (ISOR, textlines, linelinkage)

Number of lines that were changed from the old SO to the current - i.e. the sum of insertions, deletions and modifikations. (sum of all values within cabinet duration)

```
class : numeric
unique : 127

NAs : 168
not-NA : 230
not-0-NA : 224
sum : 22 612
range : [0] ... [1049]
```

examples: [103], [0], [3], [NA], [15], [NA], [NA], [228], [451], [NA] ...

lns mdf sum (ISOR, textlines)

Number of lines that were mofified - i.e. changed but not deleted or inserted. (sum of all values within cabinet duration)

```
class : numeric
unique : 96

NAs : 168
not-NA : 230
not-0-NA : 218
sum : 12 148
range : [0] ... [583]
```

examples: [1], [511], [174], [20], [46], [37], [35], [NA], [23], [104] ...

lns_ins_sum (ISOR, textlines, linelinkage)

Number of lines that were inserted into SO. (sum of all values within cabinet duration)

```
numeric
class
                     77
unique
         :
NAs

      sum
      :
      239
      678
```

range : [0] ... [11320]

examples: [0], [9482], [3364], [NA], [496], [NA], [NA], [694], [NA], [NA] ...

wds_del_sum (ISOR, textlines, linelinkage)

Number of words that were deleted from old SO. (sum of all values within cabinet duration)

```
class : numeric
unique : 144

NAs : 168
not-NA : 230
not-0-NA : 158
sum : 95 326
range : [0] ... [6059]
```

examples: [148], [NA], [1642], [0], [122], [0], [6059], [NA], [NA], [211] ...

wds_pro_maj_sum (ISOR, textlines, linelinkage)

Number of words coded as majority friendly. (sum of all values within cabinet duration)

```
class : numeric
unique : 102
NAs : 168
not-NA : 230
not-0-NA : 116
sum : 25 866
range : [0] ... [2936]
```

examples: [NA], [0], [NA], [NA], [NA], [NA], [0], [122], [45], [0] ...

wds_pro_min_sum (ISOR, textlines, linelinkage)

Number of words coded as minority friendly. (sum of all values within cabinet duration)

```
class : numeric
unique : 101
NAs : 168
not-NA : 230
not-0-NA : 120
sum : 26 009
range : [0] ... [1810]
```

examples: [NA], [134], [127], [645], [NA], [NA], [0], [154], [NA], [0] ...

wds_pro_non_sum (ISOR, textlines, linelinkage)

Number of words coded as neither majority nor minority friendly. (sum of all values within cabinet duration)

```
class : numeric
unique : 211
NAs : 168
not-NA : 230
not-0-NA : 222
sum : 547 728
range : [0] [28]
```

range : [0] ... [28262]

examples: [NA], [NA], [11986], [NA], [NA],

wds_pro_maj_mdf_sum (ISOR, textlines, linelinkage)

Number of words modified that were coded as majority friendly. (sum of all values within cabinet duration)

```
class : numeric
unique : 76

NAs : 168
not-NA : 230
not-0-NA : 89
sum : 12 191
range : [ 0 ] ... [ 2424 ]
```

examples: [0], [51], [NA], [52], [4], [NA], [NA], [134], [0], [0] ...

wds_pro_min_mdf_sum (ISOR, textlines, linelinkage)

Number of words modified that were coded as minority friendly. (sum of all values within cabinet duration)

```
class : numeric
unique : 78
NAs : 168
not-NA : 230
not-0-NA : 94
sum : 12 897
range : [0] ... [1162]
```

examples: [NA], [0], [NA], [0], [0], [20], [0], [8], [0], [NA] ...

$\mathbf{wds_pro_non_mdf_sum} \ (\mathrm{ISOR}, \ \mathrm{textlines}, \ \mathrm{linelinkage})$

Number of words modified that were coded as neither majority nor minority friendly. (sum of all values within cabinet duration)

```
class : numeric
unique : 201
NAs : 168
not-NA : 230
not-0-NA : 216
sum : 239 511
```

range : [0] ... [11883]

examples: [NA], [NA], [5], [NA], [NA], [7233], [NA], [584], [NA], [1408] ...

wds_pro_maj_ins_sum (ISOR, textlines, linelinkage)

Number of words inserted that were coded as majority friendly. (sum of all values within cabinet duration)

```
class

wds_pro_min_ins_sum (ISOR, textlines, linelinkage)

Number of words inserted that were coded as minority friendly. (sum of all values within cabinet duration)

```
class : numeric
unique : 65
NAs : 168
not-NA : 230
not-O-NA : 73
sum : 11 759
range : [0] ... [661]
examples : [NA], [83], [0], [86], [NA], [611], [123], [NA], [NA], [0] ...
```

wds_pro_non_ins_sum (ISOR, textlines, linelinkage)

Number of words inserted that were coded as neither majority nor minority friendly. (sum of all values within cabinet duration)

```
class : numeric
unique : 179
NAs : 168
not-NA : 230
not-O-NA : 200
sum : 216 980
range : [ 0 ] ... [ 11182 ]
examples : [66], [601], [NA], [NA], [NA], [NA], [0], [NA], [276] ...
```

wds_pro_maj_del_sum (ISOR, textlines, linelinkage)

Number of words deleted that were coded as majority friendly. (sum of all values within cabinet duration)

```
class : numeric
unique : 24
NAs : 168
not-NA : 230
not-0-NA : 23
sum : 2 736
range : [0] ... [980]
examples : [0], [0], [0], [NA], [NA], [0], [NA], [0], [NA], [NA] ...
```

wds_pro_min_del_sum (ISOR, textlines, linelinkage)

Number of words deleted that were coded as minority friendly. (sum of all values within cabinet duration)

```
class : numeric
unique : 26
NAs : 168
not-NA : 230
not-0-NA : 25

examples :
[Danis ...
```

wdns (ISOR, own research / EU documents)

The wordiness of a language. Different languages have different wordiness meaning that they need different amounts of words to express the same concept, sentence, regulation, . . . The variable gives the factor of wordiness compared to English based on the translations of EU documents. These are available in English

but also in all other EU languages. LAnguages that need more words than English have values above 1, languages that need less have values below 1.

```
class
                 numeric
unique
         :
                       8
NAs
                      15

. . .

```
ext_tsb_agc1_fst (ISOR, Tsebelis )
```

This variable is based on *George Tsebelis* (2002): Veto Players: How Political Institutions Work, Princeton table 7.3 at page 182 and measures government control of the legislative agenda.

The cross section values found in the table were assigned to those SO versions that were enacted in 1985 (when the agenda control measure was gathered). To extrapolate the measure over time it was: 1) multiplied by the number of words for those 1985 versions, 2) the change in majority prone and minority prone words was added (majority words as positives, minority words as negatives) 3) these text lengths were again divided by the lengths of the 1985 versions.

Because it is unclear which numeric relation the agenda control measure and the change of pro majority / pro minority words might hold (one would need a second time point to determine that) the variable exists in three variations: ext_tsb_agc1, ext_tsb_agc2 and ext_tsb_agc4. The numbers indicate by which factor the change in majority/minority friendly words was multiplied to give it an higher impact (1, 2, 4) thus increasing the variance of the agenda control extrapolation. (first value within cabinet duration)
